Where do the 3 mm and 6 mm masks disagree? Config 'kits100', exploratory (after the G1 lock) — voxels pooled per group
Grid effect (≤ 6 mm from the 3 mm edge) vs. real differences (by true label)
Who is right?
dev · 3 mm bad (n = 4)
dev · false alarm (6 mm bad) (n = 3)
dev · both fine (n = 13)
dev · all scans (n = 20)
test · 3 mm bad (n = 11)
test · false alarm (6 mm bad) (n = 6)
test · both fine (n = 63)
test · all scans (n = 80)

share of the voxels where the two masks disagree
3 mm model is right (○ ≤ 6 mm, ● > 6 mm)
≤ 6 mm (grid effect)
> 6 mm, true background
> 6 mm, true kidney
> 6 mm, true tumor
> 6 mm, true cyst
